

## **Project Initialization and Planning Phase**

| Date          | 25 May 2025                      |  |
|---------------|----------------------------------|--|
| Student Name  | Omkar Madhukar More              |  |
| Project Title | Restaurant Recommendation System |  |
| Maximum Marks | 3 Marks                          |  |

## **Project Proposal (Proposed Solution)**

This project proposal outlines a solution to address a specific problem. With a clear objective, defined scope, and a concise problem statement, the proposed solution details the approach, key features, and resource requirements, including hardware, software, and personnel.

| Project Overview  |  |  |
|-------------------|--|--|
| Objective         | To develop a system that provides personalized and efficient restaurant recommendations by analyzing user preferences, dietary requirements, location, and budget.   |  |
| Scope             | The project aims to serve users seeking restaurant suggestions that match their individual lifestyle choices and dining preferences. It will operate across various regions, considering real-time data and qualitative reviews. |  |
| Problem Statement |  |  |
| Description       | Finding restaurants tailored to specific needs is often time-consuming and inefficient. Users frequently revisit the same places, missing diverse options that better match their preferences.                                   |  |
| Impact            | Solving this problem improves user satisfaction, encourages exploration of new dining options, and reduces time spent on decision-making.  |  |
| Proposed Solution |  |  |
| Approach          | The solution employs innovative recommendation algorithms that factor in both user input and external data like ambiance, ratings, and reviews. It adapts dynamically to user feedback and real-time changes.                    |  |

| Key Features | <ul> <li>Personalized recommendations</li> <li>Real-time data analysis</li> <li>Integration of user reviews</li> <li>Consideration of dietary and budget constraints</li> <li>Scalable infrastructure</li> </ul> |
|--------------|--|
|--------------|--|

## **Resource Requirements**

| Resource Type           | Description   | Specification/Allocation   |  |  |
|-------------------------|---|--|--|--|
| Hardware                |   |  |  |  |
| Computing Resources     | 8-core CPUs and optional GPU  | 2 x NVIDIA V100 GPUs   |  |  |
| Memory                  | RAM   | Minimum 8 GB RAM   |  |  |
| Storage                 | SSD   | 1 TB SSD for storing user data and restaurant metadata   |  |  |
| Software                |   |  |  |  |
| Frameworks              | Python frameworks   | Python, Flask  |  |  |
| Libraries               | Additional libraries  | Pandas, NumPy, Scikit-learn,<br>TensorFlow, BeautifulSoup (for<br>scraping), and NLTK (for<br>review analysis)         |  |  |
| Development Environment | IDE, version control  | Jupyter Notebook   |  |  |
| Data                    |   |  |  |  |
| Data                    | Size: - Approx. 50,000–100,000 records initially; scalable based on user growth,  Format: - CSV for tabular datasets, Text/HTML for scraped reviews | Aggregated from crowdsourced restaurant platforms (e.g., Yelp, Zomato APIs), user feedback, and public review datasets |  |  |
